12.2. TESTSUITE <ts-002 functionality="" receiver=""></ts-002>	8

2. Scope

The STP (System Test Plan) specifies the test strategy and test planning. It references tests to be performed to verify the accordance of the demanded features given by the SRS (System Requirements Specification) to the implemented features. The document derived from the STP is the STR (System Test Report) where additionally the results are given.

Der Systemtestplan spezifiziert die Teststrategie und den Testumfang zur Verifikation des Pflichtenheftes (SRS). Testfälle werden referenziert. Er bildet die Basis für den Systemtestbericht (STR) der zusätzlich noch die Testergebnisse auflistet.

3. Definitions

- TC Testcase (Testfall)
- TS Testsuite (Gruppierung von Testfällen)

4. Product Names and Attributes

The following test objects must be verified:

RefId.	Product Number Product Name		ne	Product Description
1	Build 1.0		OCP	The application we developed over this year
		Client		
2	Version 1909 x64	Windows 10		The operating system

5. Features

Die aufgelisteten Anforderungen müssen verifiziert werden, sofern sie nicht als "not to be tested" klassifiziert sind. Die Tabelle bildet zusätzlich die Testabdeckung zwischen Funktionalitäten und Testsuiten bzw. Testfällen ab.

Req ID	Functionality	Prio	Testsuite ID
UC-001:	Suchen der Geräte im	A	TS-001: frontend
Search devices Netzwerk			
UC-002: Display	Anzeigen der	A	TS-001: frontend
detailed data of	Geräteinformationen		
Device			
UC-003: Save	Speichern der Konfiguration	В	TS-002: backend
changes to device			
configuration			

6. Test Preparation Strategy

Es bietet sich an, die Testfallerstellung anwendungsfallbasiert durchzuführen. Für jeden Basis-Anwendungsfall wird eine Testsuite mit der notwendigen Anzahl von Testfällen erstellt bis der Anwendungsfall aus Black-Box-Sicht vollständig abgedeckt ist. Dann wird die Abdeckung aller anderen im Pflichtenheft aufgeführten Anforderungen durch diese Testsuiten geprüft. Für dann immer noch nichtabgedeckte Anforderungen müssen weitere Testsuiten/Testfälle entworfen werden, bis eine vollständige Anforderungsabdeckung in der Tabelle im Kapitel 5 nachgewiesen werden kann.

Durch die Vielzahl der Eingabeparameter des Testobjekts und der daraus entstehenden kombinatorischen Explosion möglicher Testdatensätze ist der Einsatz von Äquivalenzklassenmethode, Grenzwertanalyse sowie Klassifikationsbaummethode sinnvoll.

7. Test Execution Strategy

Da es sich um eine Software-Neuentwicklung handelt, ist ein vollständiger Test zwingend notwendig. Die Testdurchführung soll in folgende Phasen gegliedert werden:

- 1) Frontend tests wurden zuerst durchgeführt. Dabei sollte die Funktionalität für den Benutzer überprüft werden.
- 2) Es wird die Kommunikation zwischen Front- und Backend über die API getestet.
- 3) Es wird die Kommunikation des Backends und der Profinet-Geräte getestet.

8. Test Schedule and Budget

Die Frontend Tests wurden zeitgleich mit der Entwicklung durchgeführt. Beim Backend wurde nach der Implementierung der Kommunikation mit Frontend und lokalem Netzwerk getestet. Ein Budget musste nicht berechnet werden.

9. Test Planning

Die folgende Tabelle dient der Ressourcenplanung für die Testvorbereitungs- und Testdurchführungsphase.

Testsuite	Test objective	Testplan Creator	Testplan Reviewer	Tester
TS-001	GUI functionality. Consisting	Rene	Nicolas	
	mostly of checks for displaying	Scholz	Breuninge	Rene Scholz
	the correct values		r	
TS-002	Communication, Backend	Rene	Noah	
	functionality. Consists of API	Scholz	Broß	Rene Scholz
	route testing and result check-			Kelle Scholz
	ing.

Appendix: Testcases

10.1. Testsuite <TS-001 frontend>

<TC-001-001> (should create) 10.1.1.

Testcase	ID:	1	1				
Testcase)	should creat	е				
Name:							
ReqID	:	LF20					
Test Setup: This test is used to make sure that the application creates successfully. This is usually the first basic to make.				ssfully. This is usually the first basic test			
			Test Steps	3			
Step	Step Action		Expected result		Actual Result		
1	component		true		true		
	•						

10.1.2. **TC-001-002>** (should have a title)

Testcase	· ID:	2					
Testcase	<u> </u>	Should have	e a title				
Name:							
ReqID	:	LF20					
Test Setup: This test is used to make sure that the frontend title is set.				title is set.			
			Test Steps				
Step Action			Expected result	Actual Result			
1 Component		nent	Not null	Not null			

10.1.3. **<TC-001-001>** (should refresh)

Testcase	e ID:	3					
Testcase)	Should refre	Should refresh				
Name:							
ReqID	:	LF10, LF20,					
Test Set	up:	This test is used to make sure that the refresh button works like it should. After clicking on the refresh button the application should refresh the data from the backend and display it to the frontend.					
Step	Action		Test Steps Expected result		Actual Result		
1	click						
2	detectC	Changes					
3	refresh						

<TC-001-004> (should open device info after click) 10.1.4.

Testcase	e ID:	4	4				
Testcase	2	Should oper	n device info after click				
Name:							
ReqID	:	LF20					
Test Set	up:	This test makes sure that the slide "device information" after clicking on any device in the slide "devices".					
			Test Steps				
Step	Action		Expected result	Actual Result			
1	click						
2	detectChanges						

10.1.5. <TC-001-005> (should have the correct title in device info)

Testcase	e ID:	5	5				
Testcase	2	Should have	e the correct title in device info				
Name:							
ReqID	:	LF20					
Test Set	up:	This test makes sure that the title in the device information is set correctly.					
	1		Test Steps				
Step	Action		Expected result	Actual Result			
1	click						
2	detectChanges						

<TC-001-006> (should have device name) 10.1.6.

Testcas	se ID:	6	6				
Testcas	se	Should have	e a device name				
Name:							
ReqII) :	LF20					
Test Se	tup:	This test makes sure that every device has a name.					
			Test Steps				
Step	Action		Expected result	Actual Result			
1	click						
2	detectC	Changes					

<TC-001-007> (should have device ip) 10.1.7.

Testcase	e ID:	7	7				
Testcase)	Should have	e a device ip				
Name:							
ReqID	:	LF20					
Test Set	up:	This test makes sure that every device has a ip address.					
			Test Steps				
Step	Action	n Expected result Actual Result					
1	click						
2	2 detectChanges						

10.1.8. <TC-001-008> (should have a device mac adress)

Testcas	e ID:	8			
Testcase Should have		Should have	e a decice mac adress		
Name:					
ReqID:		LF20			
Test Setup:		This test ma	t makes sure that every device has a mac adress		
			Test Steps		
Step	Action		Expected result	Actual Result	
1	click				
2	detectChanges				

10.1.9. <TC-001-009> (should have a device subnet mask)

Testcase	Γestcase ID: 9					
Testcase		Should have a device subnet mask				
Name:	Name:					
ReqID	ReqID:		LF20			
Test Setup:		This test makes sure that every device has a subnet mask				
			Test Steps			
Step	Step Action		Expected result	Actual Result		
1	1 click		_			
2	2 detectChange					

10.1.10. <TC-001-010> (should have a vendor value)

Testcas	e ID:	ID: 10				
Testcase		Should have a vendor value				
Name:	Name:					
ReqID	ReqID:		LF20			
Test Setup:		This test makes sure that every device has a vendor value. Test Steps				
Step	Action		Expected result	Actual Result		
1	1 click		•			
2	2 detectCh					

10.1.11. <TC-001-011> (should have a device role)

Testcas	Γestcase ID: 11						
Testcase		Should have a device role					
Name:	Name:						
ReqII	ReqID:		LF20				
Test Setup:		This test ma	This test makes sure that every device has a device role.				
			Test Steps				
Step	Step Action		Expected result	Actual Result			
1	1 click						
2	2 detectCh						

10.2. Testsuite <TS-002 backend>

10.2.1. <TC-002-001> (should return 404 cause route not found)

Testcase ID:					
Testcase	Should retur	Should return 404 cause route not found			
Name:					
ReqID:	LF30	LF30			
Test Setup:	This is a GET Routing test for the backend routing.				
		Test Steps			
Step Action		Expected result	Actual Result		
1 GET		404	404		

10.2.2. <TC-002-002> (should return **200** if refreshed)

			<u> </u>		
Testcase	ID:	13			
Testcase Should return			n 200 if refreshed		
Name:					
ReqID:					
Test Setu	Test Setup:		This is a GET request, it should return 200 after refreshing.		
			Test Steps		
Step Action			Expected result	Actual Result	
1	1 GET		200	200	

10.2.3. **<TC-002-003>** (get device overview)

Testcase	ID:	14			
Testcase		Get device overview			
Name:					
ReqID	:	LF30			
Test Setup:		This test makes sure that 200 is returned if a route works. Also it tests if the content is returned.			
			Test Steps		
Step	Step Action		Expected result	Actual Result	
1	GET		200	200	
2	GET		true	true	

10.2.4. <TC-002-004> (should return 404 cause route not found)

Testca	se ID:	15			
Testca	se	Detail view			
Name:					
ReqI	D:	LF30			
Test Setup:		This test should return 404 if the device is not in the list. Also it should return 200 if the device is in list. After all that it should return the content if the device is in the list. Test Steps			
Step	Action	Expected result	Actual Result		
1	GET	404	404		
2	GET	200	200		
3	GET	true	true
